Computer Hardware and Software Standards

Policy Statement:

In order to provide the highest possible level of computer support and functionality across all Valencia facilities, the College shall develop and maintain computer hardware and software standards. These standards are documented in the implementing procedures document entitled, "Computer Hardware and Software Standards." These standards are intended to support the learning mission of the college and to promote efficiency in response to user needs, cost effectiveness and fiscal responsibility in purchasing, and ease of administration of college computer hardware and software resources. These standards shall be applied on a college-wide basis to develop and encourage an environment where resources may be shared rather than duplicated, while maintaining the flexibility to address unique computing needs among individual departments at the college. All Valencia College faculty and staff shall comply with the standards as set forth in the "Computer Hardware and Software Standards".
